Flow Chart

Write the steps that describe the process of water changing from a solid to a liquid, and from a liquid to a gas.

Ice

Frozen water (ice) turns back into liquid when it melts. This can then turn into a gas when it is further heated and then evaporates.

Liquid water

Liquid water turns into a solid when it is frozen. Liquid water is also turned into a gas when it becomes further heated and evaporates.

Steam

When steam, or water vapor, turns back into liquid water when cooled down. This is called condensing. It can also turn back into a solid when frozen.
